

Horticulture Mulch by Goodwood

Goodwood Horticultural Mulch is a heavy aged mulch made from a combination of aged woodchip which has begun the process of breaking down, as well as some of the quality local soil we have in our yard.

Looks great. Blend into your environment using a natural wood effect to complement other elements in your garden.

Manufactured on site by the team at Goodwood following strict quality control processes

Completely natural. 100% recycled untreated wood, completely natural and good for the environment

Doesn't scatter. The texture and shape of our mulch ensure it mats together and stays on the ground, even in stormy conditions

Moisture retention. Holds and releases moisture to ensure constant water supply for your plants

Inhibits weed growth. Fine mulch weight suppresses new weeds yet supports existing plants

Great protection from weather. Mulch protects roots from chilly weather and hot sun, giving plants a better life

Technical

- Mixture of woodchip sizes screened to support optimal mulch performance for plant growth.
- Made from 100% recycled untreated wood sources – predominantly pallets.

Best suited for

- Avocado producers
- Kiwifruit producers
- Vineyards
- Motorway and highway treatments

Handling procedure

- Remove weeds from area prior to application
- Minimum application depth recommended is 100mm
- Wear old clothing, long sleeves and gloves during application
