

# Horticulture Mulch by Goodwood

Goodwood Horticulture Mulch is a bark based mulch made from a combination of fresh bark and sawdust - sustainably sourced from local pine log offcuts.

The perfect groundcover and protection for new and/or young plants

Moisture retention. Holds and releases moisture to ensure constant water supply for your plants

Great protection from weather. Mulch protects roots from the extremes, providing a more stable environment for growth

Doesn't scatter. The texture and shape of our mulch ensure it mats together and stays on the ground, even in stormy conditions

Inhibits weed growth. Fine mulch weight suppresses new weeds yet supports existing plants

Manufactured on site by the team at Goodwood following strict quality control processes

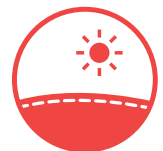

Completely natural. Made using 100% recycled untreated wood, and better for the environment

INHIBITS WEED  
GROWTH

RETAINS  
MOISTURE

KEEPS SOIL  
COOL

## Technical

- Mixture of chip sizes and sawdust to support optimal coverage and performance for plant growth
- Medium weight groundcover

## Best suited for

- Avocado producers
- Kiwifruit producers
- Vineyards
- Motorway and highway treatments

## Handling procedure

- Remove weeds from area prior to application
- Minimum application depth recommended is 100mm
- Wear old clothing, long sleeves and gloves during application
